0.31" SINGLE DIGIT RED DISPLAY

A-3121AH

Features

- 0.31 inch digit height
- Red emitting color
- White segment color, black face
- Low current operation
- Easy mounting on PCB boards or sockets
- Lead free, RoHS compliant

Applications

- Digital clocks
- Electronic meters
- Other electronic devices for displaying numerical information

Ordering Information

Part Number	Emission Color	Face Color	Bin Code	Luminous Intensity IV (µcd) (IF=10mA)		
Number				Min.	Тур.	Max.
			K	4726	5435	6145

Display Soldering Conditions

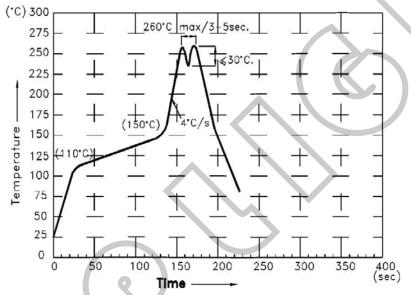

The recommended conditions for soldering are as follows. Because the component is made with epoxy resin, the units are susceptible to heat. Therefore, the preheating and soldering temperatures should be kept as low as possible to avoid damage.

1. Manual Soldering Conditions(with 1.5mm Iron tip)

Iron Tip Temperature: 350°C Max, Time: 3s Max Position: The iron should be situated at least 2mm away from the root of the leads.

2. Through the Wave Soldering Conditions

Wave Soldering Profile For Lead-free Through-hole LED

3. Soldering General Notes:

- a. Toplight recommend manual soldering to be used only for repair and rework purposes. The soldering iron should not exceed 30W in power. The tip of the soldering iron should not touch the reflector case to avoid heat-damage.
- b. Maintain the pre-heat and peak temperatures with dip units as low as possible and the times as short as is feasible, since the products are susceptible to heat during flow soldering.
- c. After soldering, allow at least three minutes for the component to cool to room temperature before further operations.
- d. If components will undergo multiple soldering processes, or other processes where the components may be subjected to intense heat, please check with Toplight for compatibility.
